

Supportive Oncology Leadership Recruitment

Indiana University School of Medicine

The Indiana University School of Medicine (IUSM) is poised to launch a substantial, long term initiative in supportive oncology in partnership with the Walther Cancer Foundation, IU Simon Cancer Center, and IU Health. These partners have ambitious goals to 1) transform the health care experience of patients with cancer and their families from the time of initial diagnosis and throughout the course of care; and 2) achieve this transformation as part of an academic, learning health system such that the lessons learned are broadly disseminated to impact cancer care throughout the nation. In recent years, academic palliative medicine at IUSM has established a robust infrastructure with the support of the Walther Cancer Foundation, other foundations [and funding agencies](#), and the health system. The IUSM is now poised to recruit leaders in supportive oncology, equipped with substantial resources and enterprise-wide support, to take this burgeoning initiative to the next level of excellence and transformation of cancer care. We invite you to take a look at these new leadership positions and consider joining us to build this ambitious vision of a premier academic supportive oncology program.

Director, Supportive Oncology

One of the most critical steps in achieving this shared vision for supportive oncology is the recruitment of an experienced investigator and visionary leader in the field of palliative care and oncology. This leader will be supported by one of two endowed chairs created by the initial Walther investments in this initiative. The successful candidate will have an independent and sustained track record of funding, experience mentoring learners and junior faculty, and the skills and vision required to foster interdisciplinary research and clinical care. This leader will have demonstrated interpersonal and communication skills needed to both navigate and capitalize on existing resources, people, and strengths in our complex, matrixed environment. Candidates should possess an MD, PhD, or MD/PhD.

Senior Faculty, Psycho-oncology

A vital component of this shared vision for supportive oncology is recruiting a leader in psychosocial-centered oncology care delivery and research. Psycho-oncologists are invited to consider the above directorship as well as this senior faculty position. This position will be supported by one of two endowed chairs created by the initial Walther investments in this initiative. The successful candidate will have an independent and sustained track record of funding and scientific leadership in areas related to psycho-oncology, palliative care and oncology. Candidates should possess an MD, PhD, or MD/PhD.

Candidates interested in this opportunity should visit <http://faculty.medicine.iu.edu/jobs> to apply. Please include one PDF containing the following: (1) a short letter of interest noting key experiences, and (2) a curriculum vitae.

To learn more about these recruitments visit: <http://faculty.medicine.iu.edu/jobs/>. The priority application deadline is July 31, 2016.
