PROGRAM

The Ohio Valley Chapter will present a two-part program :

Part one is a presentation by the project team at Summit Country Day on the project that had to be completed over the summer recess. Design Assist was a critical component in the overall success of this construction and renovation project. The team will focus on the use of Design Assist in three primary applications. They will discuss issues encountered by each of the team members, and review project success and lessons learned

Part two will be a hands-on simulation that highlights the historic approach to design. It will provide the basis for a discussion on how lean can be used to improve workflows.

Certificate of completion available upon request. Attendees are responsible to verify this presentation meets their specific requirements for Professional Development Hours.
