

Conference Week Enrichment Program

Sponsored by DAEG

Ever wondered how to make slime or how a volcano works? In this hands-on program, we will explore some basic principles of science by making things foam, fizz or fly! We might find out how to make colors move, how quicksand works, make a rocket out of a film canister or more! Learn the properties of matter and how technology helps us to expand our knowledge on this, discover how forces can make an object move, how properties of an object can change and more! Participants will make a few things to take home too.

Who: Grades 1-5. Kindergarteners **MUST** attend with parent or caregiver

When: **HOLMES: Wednesday, December 2nd from 1:30- 2:30pm**
Children **MUST** be picked up at the Common Room promptly at 2:30pm
