

# RARE & ENDANGERED SPECIES OF THE LAKES REGION

presented by  
Rick Van de Poll

Mosquitoes? Poison Ivy? Skunks? We all know these to be common, and at times, pesky members of our biological community, but what about the stuff we don't normally see? What about painted bluet damselflies, or ginseng, or lynx?

This talk will emphasize the oft-unnoticed elements of our flora and fauna, and discuss the reasons why they're rare, as well as the uncommon and often fragile natural communities that they require.

This richly illustrated slide lecture will also cover the growing concerns of a changing climate on some of our favorite wildlife species.

Thursday, October 15<sup>th</sup> @ 7:00 p.m.
