

Student Interaction Opportunities

BIM clash detection sessions

Shows how each trades individual 3D model is combined into one overall model then how changes are made based off what this information provides.

Submittal and RFI Process Walk-Thru

BNIM and JEDunn walk students through the submittal and RFI process and share how professionals work together to solve problems to create the final product.

Quality Control Process Tutorial

Involve students in the Quality Control Process to show them the importance of installing quality work correctly the first time.

Punchlist and Safety Walks

Students participate in punchlist and safety walks to learn what we look for and how we correct items that are found.

Tours

The College of Architecture, Planning and Design has set up a tour request process for studios and classes to tour the construction site with faculty member and an individual from project.

Other opportunities will be announced as they come available.
