SP 15.*

Admin/General

- Users will now have the ability to change their password. This will be accessible via the Inbox on the General tab. The permission ('Change Logon Password') will have to be granted to the user.
- Made additional log entries into the System Audit Trail when a User's SSN is changed within the personnel module.
- The printing of the primary reports in each module are now being logged in the system audit trail. This tracks the date/time of the printing and the user initiating the print.
- Enhanced the remote updating capability for client workstations. The files that are needed for updating a client workstation can now be placed directly in the database on the server. The setting 'Allow Remote Updates?' found in Application Settings on the Administration screen must be checked. Each workstation will need the 4.0 .NET client profile update installed to take advantage of this feature. If a pending update exists in the database it will be downloaded when RMS is launched. Please contact Southern Software support for help using this feature.
- Added the server minor version to the about screen to more accurately show the application version.
- The ability to search by day of week was added to each individual module's search feature. Each date field now has a separate day of week search option.

Users/Personnel

- The ability to print a personnel/user record was added.
- Reports were added for printing permissions "granted" and permissions "denied". These can be accessed under the File menu.

Incident

- Added functionality to prevent the Supplement Narrative from printing. In the Incident module choose the File menu option Print/ Preview. When the Print Option screen appears de-select the Print Supplement Narratives checkbox to prevent the Supplement narrative from printing.
- Solvability factor now shows as a percentage on the Incident Properties form.
- Incidents can now be related to other incidents. This feature can be found on the General page under the page Related Cases. Cases that have been related can also be seen on the Related Items screen accessed from the View Menu.

- The ability to copy a property item was added. This can be used to copy the currently displayed property record to help reduce data entry. The Copy Property Item menu option can be found under the Insert menu when on the Property page.
- Added the ability to redact the officer's names from the reports using the redaction feature.
- Added the ability to show "Approved" on the incident report along with the approving officer's name when a report has been approved in case management. To enable this feature check the appropriate setting on the Case Management page found on the incident settings screen.
- The "Copy Incident" feature was added to the File menu. This feature allows for copying the currently open incident. Once the menu option "Copy Incident" is clicked the user is presented with a screen that allows for specifying what sections of the incident should be copied. Once the sections are chosen and the copy is made, the user is then presented with the option to immediately open the newly created incident record for editing.

Officer Activity Log

- Added reporting zone, dispatch zone, patrol zone, and other zone to the general page on the event details screen. These fields share the same lookups used for incident.
- The "Create Report" feature was added to the Event Details screen. This is accessed by clicking the "Create Report" button and from there the desired report can be selected. An accident, incident, or ordinance ticket can be created. The report created will contain the data entered from the event details that is pertinent and then can be edited further.
- The "Others Involved" page was added to the "Event Details" screen. This section is intended to hold additional persons involved beyond the primary victim, complainant, or accused. A person type field was also added to allow for indicating the type of person involved. An additional section was added to the Operations Report to enable printing these additional people when needed.

Case Management

- Added ability to search approval and assignment information from the incident and accident search screens.
- Added settings to incident and accident that allow changing the default behavior of the "assigned to" list of officers when making an assignment for investigation. It can now be defaulted to list all officers if preferred.
- Added the ability to print the approval log history. This was added in incident and accident.

Inbox

- The primary victim was added to the incident lists in the inbox. This can be viewed by checking the View Incident Details checkbox.

Evidence

- Evidence now supports capturing electronic signatures for custody and disposition receipts. The use of this feature requires the purchase of supported signature capturing hardware. Contact Southern Software for details.
- The item's sequence number (record number) was added to the main evidence report and the individual item report to allow for easier identification of a particular item
- The audit trail feature was added. This feature tracks all edits and deletes in the evidence module similar to incident. The date/time of change, field being changed, user making the change, old value, and new value are all tracked for each edit. The audit trail can be viewed and printed from the "Audit Trail" option found in the View menu.
- The item's sequence number was added to the numerous item search result lists next to the tag number and to the reports based on these lists.
- The item description on the item report was increased to allow for printing a longer description.
- The Open Evidence screen now contains the ability to scan and navigate directly to an item on any evidence record. To use this feature choose to open an evidence record and then place the cursor in the supplied "Scanned Tag Number" box. Scan a barcode and then the feature will perform a search and automatically navigate to the item scanned.

Security Alerts

- When printing the report "Security Alert (BOLO)" there is now an option to hide the badges. The printing of the badges is controlled by the setting "Print Badge Images?" which is found in the Security Alert Settings screen on the Report page.

Master Name Index

- A feature was added which allows storing historical photos. As new photos are taken the previous photos are stored in the master name module under the Photo History page. This can be found along with the residence and employment history on the Prior Info page. From here historical photos can be viewed and printed. When updating a photo using either the Update Master Name Record menu option or F10 key, the user has the option to add a historical photo history. A photo history will always be created when updating a name with a new photo, unless specified otherwise, same as the other historical information such as employment and residence. When combining names with the Combine Duplicate Names feature on the Master Name Index Maintenance screen the user has an option to create a photo history as well.
- Date created and time created is now being stored when a mugshot is acquired. This can be seen under the image from any place in the application where mugshots can be viewed. Unfortunately mugshots acquired prior to this new feature will not have date/time created values.
- "Corporate Policy Affected" has been added to the violation history screen and report accessed from the Involvement History page.

Master Vehicle Index

- VIN and license plate number fields now have separate search capabilities for controlling vehicle insert behavior. A nonintrusive popup screen will appear below the VIN/LPN fields when the data entered matches an existing vehicle. This works very much like the first and last name searches for master name.
- New settings were added to the Master Index page on the Application Settings screen found in the Administration section. These settings allow for controlling certain master vehicle behavior such as the auto-search features.

Summary Reports

- Created report for Case Management ("Unapproved Incidents Assigned for Correction by Officer") and Accident Management ("Unapproved Accidents Assigned for Correction by Officer") that shows unapproved reports that are assigned for correction.
- "Incident Offenses/Victims/Status By Officer" report now has an option for choosing case status and disposition criteria.
- "Incident Property Totals By Status" report now has an option for choosing property status criteria.
- Several reports were added for case management which print summaries of closures by assigned officer. "Incidents Cleared" shows details for cleared cases by assigned officer. "Incidents Cleared by Assigned Officer" shows details of closed cases grouped by assigned officer. "Cases Assigned and Cleared by Assigned Officer" lists totals of clearance types for each assigned officer grouped by offense type. "Incidents Status/Disposition Totals By Assigned Officer" lists case clearance totals for the assigned officer. Each of these reports allows for a date range criteria and a particular assigned officer, supervisor of officers or all officers criteria.
