

San Onofre (SONGS) Nuclear Waste:

Where do we move it? How do we get it there? When can this be done?

for National Security and Environment

***“We must be cautious, we must be smart and above all,
WE MUST NOT RELY ON EDISON FOR ALL OUR INFORMATION.”***

We continue to have significant political wins in our battle to remove the 1632 tons of lethal nuclear radiation at San Onofre. But we must continue to fight hard until every ounce of radiation is moved!

Wednesday, June 8, 6 PM, Laguna Beach City Hall, 405 Forest Avenue

Where do we move it? How do we get it there? When can this be done?

- Did Edison really close San Onofre or are they just changing their business model and leaving us with a nuclear waste dump on the California Coast?
- Why is Governor Jerry Brown refusing to release his emails between his office and Southern California Edison, his office and the California Coastal Commission, with state attorney, Kamala Harris, and his office, between the Coastal Commission and his office and between his office and the now disgraced former president of the Public Utilities Commission, Michael Peevey and Southern California Edison?
- European studies show increased rates of cancer among those living near nuclear power plants. So why did the Nuclear Regulatory Commission cancel the San Onofre Cancer study that the prestigious American Academy of Science spent 5 years developing methodology for the study? Is there something they were afraid of finding?
- Why is there less security around SONGS despite the fact that we know American power plants are a prime target for terrorism?
- Why did Edison announce that the California Coastal Commission had granted their permit to bury SONGS nuclear radiation an hour before the commission had even voted on it?
