

BAM! BAM! BAM!

More on the Beach Project

**By John Brentari
Properties Committee**

BAM! BAM! BAM! goes the pile driver.
Pound, pound, pound goes the
hammer.

We've been making noise at The BEACH this past month. The floating pile driver recently installed cedar pilings for the swim docks and for the new jump platform. The pilings for the swim docks will anchor the docks to form our new 5,000 square foot swim area. We're expecting delivery of the new dock sections of in the next few weeks.

Also underway is construction of our lake jump platform. Four cedar pilings will support two platforms. The first platform will be just above water level. The upper platform will have a rope swing to allow jumping into the lake.

The Rotary Club of Arlington was also making noise this month at Camp this month pounding away with hammers. They built the first of two covered pavilions for the beach. This Rotary Club has been a contributor on other projects at our Fire Mountain Scout Camp and came through again in building large shelter for The BEACH. There will also be a smaller shelter at The BEACH. Thanks are again in order to Arlington Rotary Club for their help on the project. We understand they will be returning this fall to help with additional projects!
