Is your Privacy at Risk?

Windows and other software programs store history about the different activities that you have performed on your computer and on the Internet. All sites that you visit are stored for later use, including temporary files and cookies from these websites.

Simply deleting these files doesn't protect you, as deleted files can easily be recovered with the right software. Children, Loved ones, and law enforcement can easily retrieve discarded files and stumble upon sensitive information located on your computer's hard drive.
