In the US, an estimated 3.2 million women age 50 and over, and 1.68 million men age 50 and over are affected by Dry Eye Disease.

Why Omega-3s?

Omega-3s are essential nutrients which cannot be made or stored in the body and are the major components of meibum.

Why Omega-3s?

Omega-3 essential fatty acids are helpful in systemically reducing the inflammation of the accessory lacrimal glands of the eyes.

Why Omega-3s?

Omega-3 essential fatty acids are beneficial in controlling meibomitis and chronic lid disease.

Which Omega-3s?

Not All Omega-3s are created Equal Effective Omega-3
 supplements must
 contain a high
 concentration per serving
 of purified Omega-3 fatty
 acids in a unique 3:1
 formula supported by
 clinical evidence

2 S. G. Smith, Deposition of Long Chain Omega-3 Fatty Acids in the Meibomian Glands After Oral Administration of Re-Esterified Triglycerides, page 3.

Which Omega-3s?

Targeted Clinical Nutrition

Effective Omega-3
 supplements are in a re esterified triglyceride form,
 which has been clinically
 shown to have bioavailability
 of 124%, providing greater
 bioavailability than consuming
 omega-3 rich foods such as
 fish (1)

² S. G. Smith, Deposition of Long Chain Omega-3 Fatty Acids in the Meibomian Glands After Oral Administration of Re-Esterified Triglycerides, page 3.

Which Omega-3s?

Proven
Clinical
Outcomes

Optimal Omega-3
 supplements that
 provides a proprietary
 ratio of 3:1 EPA/DHA,
 which has been clinically
 proven to address a
 potential root cause of
 posterior blepharitis (2)

Dried Blood Spot

COLLECTION INSTRUCTIONS

Please read these instructions carefully before beginning

- Remove all components from the envelope. Leave the desiccant packet in the small plastic bag.
- 2. Fill out the information requested on the sample collection card and on the Test Request Form
- 3. Wash hands thoroughly with warm water. Then hold your arm down at your side for 20 seconds to increase blood flow to the fingers.
- 4. Collect the sample. Open the alcohol wipe and clean the side (not the pad or tip) of your finger you plan to use, typically the middle or ring finger. Remove excess alcohol with the cotton ball.

Twist off the blue protective lancet cover (Figure 1). Place the lancet device firmly on the side of your clean finger and quickly press downward into your finger (Figure 2). This will release a small spring-loaded needle and you will feel a faint sting.

Allow the blood to collect on your finger until a drop forms (Figure 3). If needed lightly squeeze your finger to form a drop

Minimal chair time due to health coaches

Providing Superior Patient Outcomes

- Patient comments taken seriously instead of viewing DED as a 'nuisance.'
- Patient outcomes measured objectively with TO and InflammaDry™, Omega Index.
- Word of mouth ambassadors of good will increase patient referrals.

Providing Superior Patient Outcomes

Health coaches have shadowed docs and staff in our offices.

This experience has enabled them to craft correspondences tailored to all patients.

Nutritional Video
