**Summary of Discharge**  
**Children Hospital Affiliated to n University**

Name: AARON    Sex: Male    Age: 2 months and 17 days

Date of admission: Apr 8, 2011

Date of discharge: May 5, 2011

Outpatient diagnosis: lumbosacral meningomyelocele

Admitting diagnosis: lumbosacral meningomyelocele

Discharge diagnosis: lumbosacral meningomyelocele, hydrocephalus

Condition on admission:

1. Lumbosacral mass at birth which was aggravated
2. Physical examination: there was a mass at lumbosacral region about 4cm at diameter in which there was spine. There was rachischisis.

Examination: 20110408: WBC $17.2 \times 10^9/L$ , PLT $140 \times 10^9/L$ , N39%, HGB105g/L, CRP<8mg/L, HIV(-), TPPA(-), ABO: O+

20110412: PLT $671 \times 10^9/L$ , N69.6%, HGB172.1g/L, WBC $21.7 \times 10^9/L$

20110420: WBC $14 \times 10^9/L$ , PLT $606 \times 10^9/L$ , N40.4%, HGB129g/L, CRP<8mg/L

Special examination:

X-ray: increasing lung markings

MR: tethered cord syndrome, lumbosacral meningomyelocele

B-us: residual urine: 20ml

UCG: PFO

CT: full lateral ventricle

Pathological report: fibroplasias, inflammatory cell infiltration

Treatment: by active examination, repair of spinal meningocele was made under general anesthesia on Apr 12, 2011. Procedure of operation was successful. He was granted anti-infection and symptomatic treatment. He recovered well. Operative incision healed well. Rechecked CT showed hydrocephalus. Ventriculoperitoneal shunt was made on Apr 27, 2011. He recovered well. Rechecked examinations were normal.

Complication: no

Condition on discharge: general condition was well without fever or vomiting. Appetite was normal. Urination and defecation were not normal. Operative incision healed well and was sutured out.

Advice on discharge:

1. healthy teaching
2. rechecking one month later
3. follow-up

Result: improve

Physician: XXX

## **Growth Report of AARON**

### **1. In the early days on admission**

AARON, Male, was born on Jan.2 2011. On Jan.21 2011 he was abandoned at the gate of Primary School, District of City, and was picked up by Comrade . After a lot of search did by the police station but failed to find his birth parents. Then the Picking Certificate on the Abandoned Child was issued and he was sent to our institute for parenting.

On admission, the Parenting Department on Infant and Children name him AARON. “” means the welfare institute of City, “” is the status of a generation in the institute, and “” means bright dazzling. The health doctor carried out the whole examination for him: pale, big eyes, a mass on the back of his waist, wore clothes with red flowers, stable breath, trachea in the midline, soft neck, bilateral thorax symmetrical, no abnormality of heart and lungs by auscultation, soft abdomen, dry umbilical region, not palpable under the rib of liver and spleen, normal development of limbs, spinal meningocele, 45cm in height, 31cm in head size, 31cm in chest size and 2.8kg in weight. Initial impression: 1. male newborn; 2. spinal meningocele.

### **2. Growth development**

On admission, he sleeps when he is full and sleeps over 20 hours every day; he mainly has milk, 80ml per meal; the mass on his back doesn't affect his growth development. At the age of 4months, his volume of milk increased. During this time, we add the supplementary food for him, kinds: steamed egg, porridge, cod liver oil and rice flour etc. He has a meal at 15:00, step by step, from less to more; when the weather is fine and the air is clean, the caretaker would cuddle him out to bask in the sun, to take a fresh breath and enjoy a sunbath. After he is 1 year old, every morning he drinks milk at 5:30, gets up at 7:00, has breakfast at 8:30, plays game from 9:00-10:00, has milk at 10:30, takes a noon nap from 11:00-14:00, has a meal at 14:30, plays game from 15:00-16:00, has milk at 17:30, goes to bed at 20:00 and has milk at 23:00. Every day he has four meals of 240ml milk, and twice additional meals, with kinds of steamed egg, noodle, porridge, soft rice, bone soup, fish soup, liver, vegetable, fruits and snacks etc. He has good appetite and is not a picky-eater. Every meal he has half a bowl of food. He has defecation once and urination 6-7 times a day, as well as moderate sleep.

### **3. Physical condition**

On April.8 25011, with the support of the Foundation Love without Boundaries, he was sent to Pediatric Hospital Affiliated to University in to perform the surgery of lumbosacral Meningomyelocele; the wound healed well and no other unwell. On May.5 2011, he was discharged, and lived in a foster family for a time after discharged. On June.26 2013 he came to Rehabilitation Center of Love without Boundaries of USA. The doctors carried out the routine check: 8.6kg in weight, 74cm in height, 45cm in head size, 44.5cm in chest size, have 18 teeth.

After he came to the Rehabilitation Center, he gains the excellent care and has good recovery after the surgery. Every day his schedule: get up at 7:00, have egg and porridge for breakfast and add Calcium and vitamin AD; he has activity at 9:00, and has snacks, has nutrition noodles at

11:00, takes a noon nap at 12:00, eats fruits at 15:00, and takes part in the activities, has nutrition porridge at 17:00, takes a bath at 18:30, has snacks at 19:30, and goes to bed at 20:30-21:00.

### 3. Foster condition

In May of 2014, he was placed to a foster family with the support of the Foundation Love without Boundaries. The foster parents love him very much and view him as a part of the family. The surgery on his waist caused his abnormal walking, but didn't cause his movements. Now he can stand up with hands holding onto support, can walk with hands holding onto support, can climb, can crawl fast, can go upstairs and ride the cockhorse. He has normal appetite and capacity for eating, can have a bowl of nutrition noodles or a bowl of nutrition porridge, and can have milk 180-200cc, with normal sleep; he can make sound of mama and can express goodbye and welcome by gestures. Now he is 86cm in height, 12kg in weight, 48cm in head size, 52cm in chest size and has 20 teeth.

### 4. Immunization

On admission, we issued him an immunization card. Now he has been vaccinated with BCG, EMV, DPT and MV booster, JEV and A+C EMV booster, which laid a good foundation for his healthy growth.

AARON is handsome and has fair complex, as well as grows out a mouth of white teeth. He has a big smile; if we don't tell you that he is a boy, you would take him for a girl. He has outstanding personalities, and is a man; if there is his favorite object, no matter whose hands it is in, he would like to get it, will not be soft. If he fails, he would cry to ask for help to mom. He is clever, and can understand adult's facial expression and tones, and gives the corresponding response; he likes to play in the yard, touches the flowers and grasses, picks berries; he likes to see the flying bird, the flying butterfly in the sky, the fish in the pool, and the dog in the doghouse. We hope that AARON would be adopted by the family as soon as possible, to let him have a better living and learning environment, as well as to grow up healthily and happily.

Note: On Sep.12 2013 AARON was sent to the hospital due to the vomiting, and the results of diagnosis: hydrocephalus (postoperative, shunt tube obstruction); the hospital gave him the corresponding treatment, now he is fine, and the doctor suggests if a similar situation will occur again, he must go to hospital in time.
