

Did You Know – Just the Facts – of Prostate Cancer?

Prostate Cancer is the second leading cause of deaths from cancer among men in the United States.

It is estimated 233,000 new cases of Prostate Cancer will be diagnosed in 2014 in the United States.

It is estimated that 29,480 of those new cases will die.

One in six men in the United States will be diagnosed with Prostate Cancer in their lifetime.

Men should have a PSA (Prostate Specific Antigen) test and digital rectal examination by age 40, with follow-up screening by age 45.

Men having a greater chance of getting Prostate Cancer at age 50 years or older are African-Americans and other minority males whose father, brother or son have had Prostate Cancer.

Currently there are no specific measures known for the prevention of Prostate Cancer. However, early screening with PSA and digital rectal examinations could lead to diagnoses of Prostate Cancer.
