Don't Get Burned: Safe Oxygen Handling

It's easy to get lax around concentrated oxygen, especially when you are handling oxygen containers every day. However, the chance for catastrophic incidents increases if oxygen's latent capabilities are ignored. Disregard the overlapping OSHA, NFPA, and DOT rules addressing safe oxygen handling at your peril. Sign up for this program and meet your accreditor as well as regulators required staff training on oxygen.

Vianna Zimbel, RRT

Vianna Zimbel Consulting

Vianna Zimbel has been involved in Home Care since 1980, beginning as a Respiratory Therapist performing home visits to oxygen patients, and eventually promoted to National Homecare Services Manager for LINCARE.

She began consulting in 1993, preparing DMEs for Joint Commission and then later on all CMS recognized accreditors. She has written and continuously updates national standardizing operational policies, with emphasis on compliance with FDA, DOT, and OSHA's regulations for health care providers.
