

Quality digital cartoners

Your best value
in North America

Our Horizontal Digital Cartoner HC 120 features:

- Complete stainless steel and aluminum construction
- Rotary carton feeder
- Rigid monohull frame
- Touch screen operator interface
- Lexan safety covers
- Continuous or intermittent motion
- Optional
Infeed conveyor, Ink and deboss code daters, Extended motorized carton magazine, Wash down system.

Less mechanical adjustments and perfect set up. Speed, glue application and production settings can be entered or recalled from Touch Screen operator interface. This precise reproduction of running conditions means better reliability, quality of the cartons and quick change over.

Operator interface constantly monitors the performance of your machine and will display the origin of the detected problem.

Powerful Omron programmable controller digitally interprets the exact position and state of every carton on the main lag conveyor, which makes it easier to add automatic loading modules, labeling or printing attachments. That gives you an option to upgrade the machine at a lower cost.

Speed

The machine is built with no compromise on speed. Highly efficient rotary carton feeder is standard and can provide over 100 cycles per minute with average size of product.

Reliability

Is assured by workmanship and quality components like Omron digital incremental encoder, interfaced with Mitsubishi PLC. Mechanical design with minimal use of pneumatics provides smooth quiet operations at any speed.

Also available:

Vertical and Horizontal automatic cartoner, Case Packer, Tray Former, Case erector-Sealer and many more....
