"Learn How to Use a Computer Without the Embarrassing Hassle of Taking a Class or Asking Your Children"

Hey you are not alone!

Do you ever just feel like throwing your computer out the window in frustration. I know I have. That was back in the days when I had no clue on how to use a computer. But computers are not that hard to understand, you just need to take the time to learn some simple computer basics. Often a new computer user will get overwhelmed, panic and often click on links and buttons that amazingly cause instant errors. You can avoid all of this stress by gaining some important knowledge up front. How can you expect to use a computer to its full capacity when you have not learned the basics yet? It's like going out and driving a car without any lessons, you are %70 more likely to have an accident and crash the car. The same applies for computers.

Step By Step

People seem to skip the basics and presume that you know the really basic tasks on a computer.

All Versions of Windows

This Computer Basics Package will cover all versions of Windows from Windows XP to Windows Seven.
