

Best Management Practices for Construction and Landscaping in Hamilton County

Instructor: Daniel Taphorn, Urban Conservationist, Hamilton County Soil & Water Conservation District

Friday, October 23, 11:30 am – 1:00 pm

Cost: \$20 (includes lunch)

Join us for an overview of the Hamilton County Earthwork Regulations; the Earthwork Regulations address Geotechnical areas i.e. stability of hillsides as they relate to cut and fill activities for construction and landscaping projects, as well as the erosion and sediment control practices that are required on construction and landscaping projects in order to protect and/or minimize impacts to water quality. The presentation will include some of the standards and specifications for erosion and sediment control, Best Management Practices (BMP's) such as silt fence, mulch berms, sediment traps, and temporary and permanent stabilization of bare soil. The presentation will also review the requirements under the Ohio EPA's NPDES Construction Permit and address impacts to regulated water resources under the US Army Corps of Engineers 404 Permit.
